

Reflectashield

General Description:

Reflectashield is a braided fiberglass sleeve laminated to an aluminum foil. The sleeve is virtually seamless and displays minimal edge fray when cut.

The outer aluminium layer is highly reflective; the inner fibreglass substrate provides further thermal insulation, protecting components from both radiant and conductive heat.

Reflectashield is an unobtrusive and easy to apply solution for the thermal protection of various automotive components.

Typical applications

- Engine wire harnesses
- Hoses and tubing
- A/C line
- Hydraulic and fuel lines
- Control cables.

Features

- Working temperature > 150°C
- Flexible
- Resistant to attack from many types of fluids and chemicals.
- Easy Installation

Standard Sizes

Reflectashield is available in sizes from 10mm – 38mm internal diameters.

Nominal Internal Diameter (mm)	Packaging (m)
10	150
13	150
16	100
19	100
22	100
25	100
32	50
38	50

Reflectashield is also available in cut pieces.
